Data Limitations	Borehole, casing and tubing depths are determined through direct measurement of drill pipe, well casing and tubing strings that are recorded on Tubing and Casing Records. All depths below original ground level were made in reference to a ground level datum or benchmark pin that was driven into undisturbed soils near the borehole prior to drilling. All depths and stick-up measurements are relative to this datum. Depths of completion materials (sand, grout, and other completion materials) are determined by "tagging" the depth of the emplaced material with a wireline tagging tool. The field accuracy of the tag tool is considered to be +/- 1 ft beyond 1000 ft and +/- 0.5 ft at a depth less than 1000 ft. Depths are not corrected for borehole deviation.
