## **MEMORANDUM**

**DATE:** February 13, 2001  
**TO:** Mal Murphy [malmurphy@home.com]  
**CC:** Danielle Fife [dfife@nrff.com]  
**RE:** **SATURATED ZONE FLOW & TRANSPORT AMR Reviews**  
**Abstraction of Flow Fields for RIP**  
**ANL-NBS-HS-000023**

---

As an abstraction model, this AMR has little to say. It states that RIP is now called GOLDSIM. RIP is based on 18 UZ site-scale flow fields from TOUGH2, which are used as inputs for FEHM. FEHM contains the particle tracker to predict flow paths and breakthrough times described in other AMRs.
