Title of Data	Radioactivity Analyses Reported by Barringer Laboratories, Inc. (Golden, CO) on July 8, 1999 to GMII for EWDP I Spring 1999 Water Sampling (hydrogeochemistry)					
Description of Data	An MS Excel file (barr08july99.xls) contains site names, sampling dates, radioactivity measurements on water samples (gross alpha and beta), uncertainties, GMII sample numbers, laboratory sample numbers, analysis dates, laboratory method, and pump and depth.					
Data Collection Method	Water samples were collected from the discharge line of a down hole Bennett pump (after discharge of at least 3 well bore volumes of fluid) into 1 liter high density polyethylene (HDPE) cubitainers, labeled in the field, and shipped to laboratory from the office.					
Data Location(s)	Nye County's Early Warning Drilling Program wells NC-EWDP-01s (2 zones), -09sx (3 zones), and -03s at specified depths.					
Data Collection Period(s)	5/17/99 to 5/20/99					
Data Source(s)	Original laboratory analyses in RID 1387 and GMII field geochemistry notebook.					
Data Censuring	None					
Data Processing	Laboratory data reduction performed by Barringer Labs., Inc.; data compiled into MS Excel spreadsheet for distribution by D.L. Shettel of GMII.					
Data Limitations	Depth of Bennett pump below casing point is for a single screened interval of a piezometer well, or close to a sampling port of a packed off interval of a Westbay completion. 2 sigmas are given for statistical counts of radioactivity from the detectors.					
Governing QA Docs.	TP-8.1					
Frequency of Transmittal	As required by PI
